Creation of Derived Columns

To better understand store performance and identify risk areas, a few additional columns were created from the existing monthly attach percentage data (Aug–Dec). These columns help summarize performance, consistency, and risk at store and branch level.

- Store Avg Attach
- Branch Avg Attach
- Active Months
- Zero Attach Months
- Store Category
- Risk Flag
- Underperformance Flag
- Region Type

Tools used for Analysis

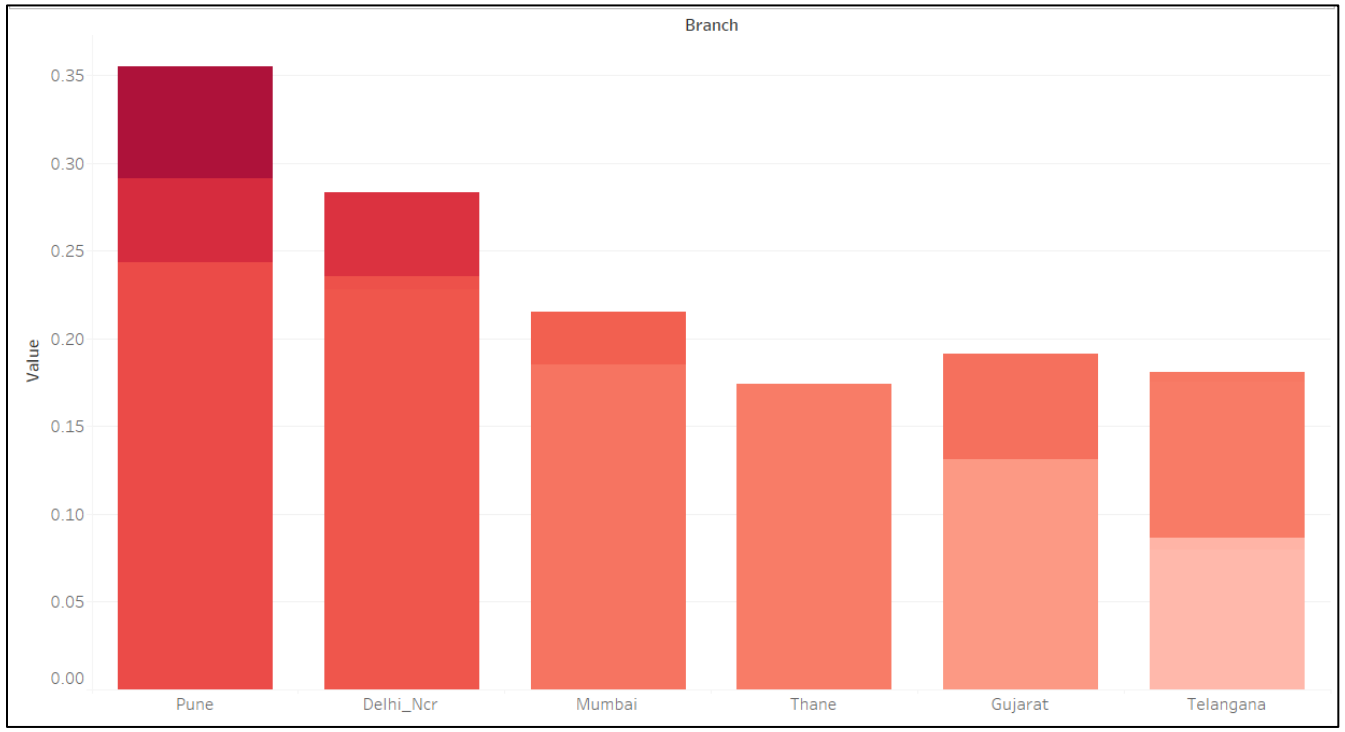

Summary

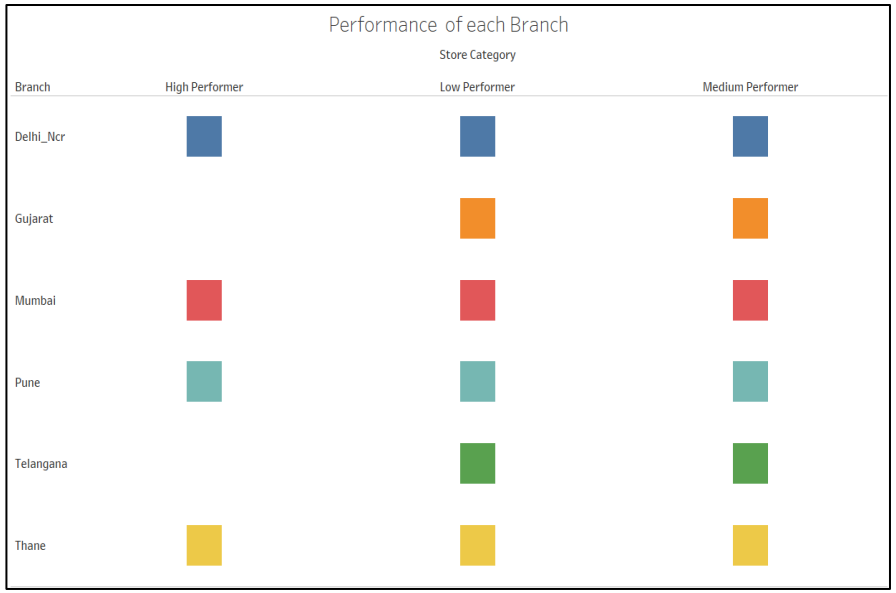

Evaluated monthly store-level insurance attach (Aug–Dec) to assess performance, consistency, and regional risk.
November-December peak I,e. August weakest: strong seasonal trends in customer conversion.
Pune and Delhi NCR lead performance; Pune is the most stable and execution-driven despite only 16 stores, making it prime for expansion.
West Region has the highest overall attach, followed by North; South (Telangana) lags despite 40 stores: store count doesn’t equal performance.
Telangana consistently underperforms, with several stores at 0% even in peak months: structural, not seasonal, issues.
Some Telangana and Delhi NCR stores repeatedly hit zero attach: high-risk locations needing urgent action.
High-performing stores should serve as benchmarks; low/zero-performing stores require targeted training, incentive changes, or possible closure.
Recommend selective expansion in strong markets (Pune, Delhi NCR) and rationalization plus corrective measures in underperforming regions (Telangana) to boost profitability and efficiency.

Branch & Regional Performance Overview

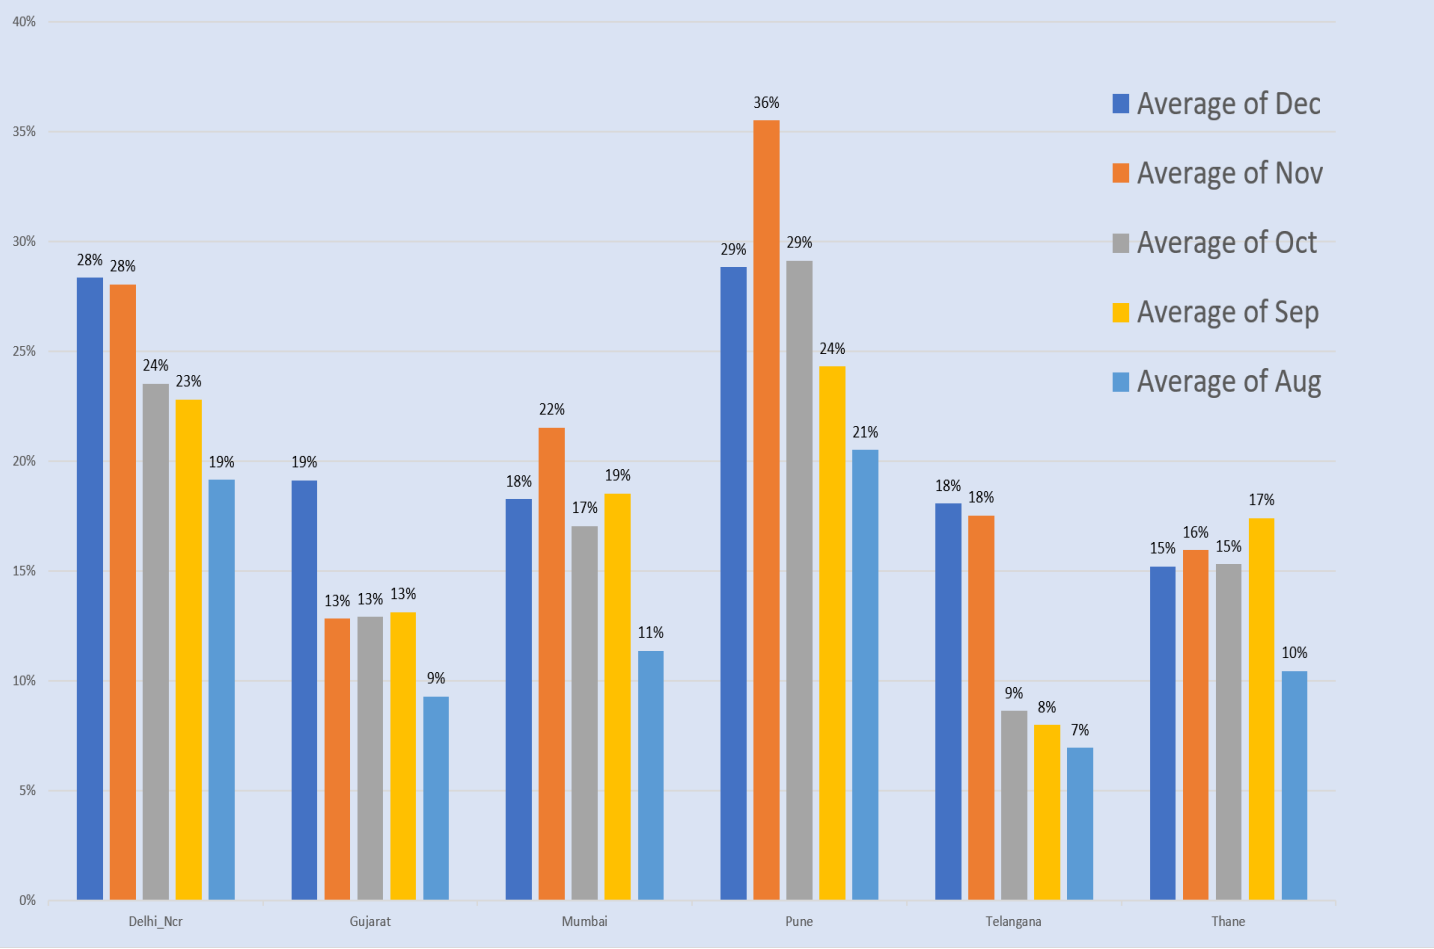

Pune emerges as the most active and best-performing branch region, consistently contributing the highest insurance attach percentages across months.

Telangana is the least active region, showing the lowest overall contribution to insurance attachment despite having a large store footprint.

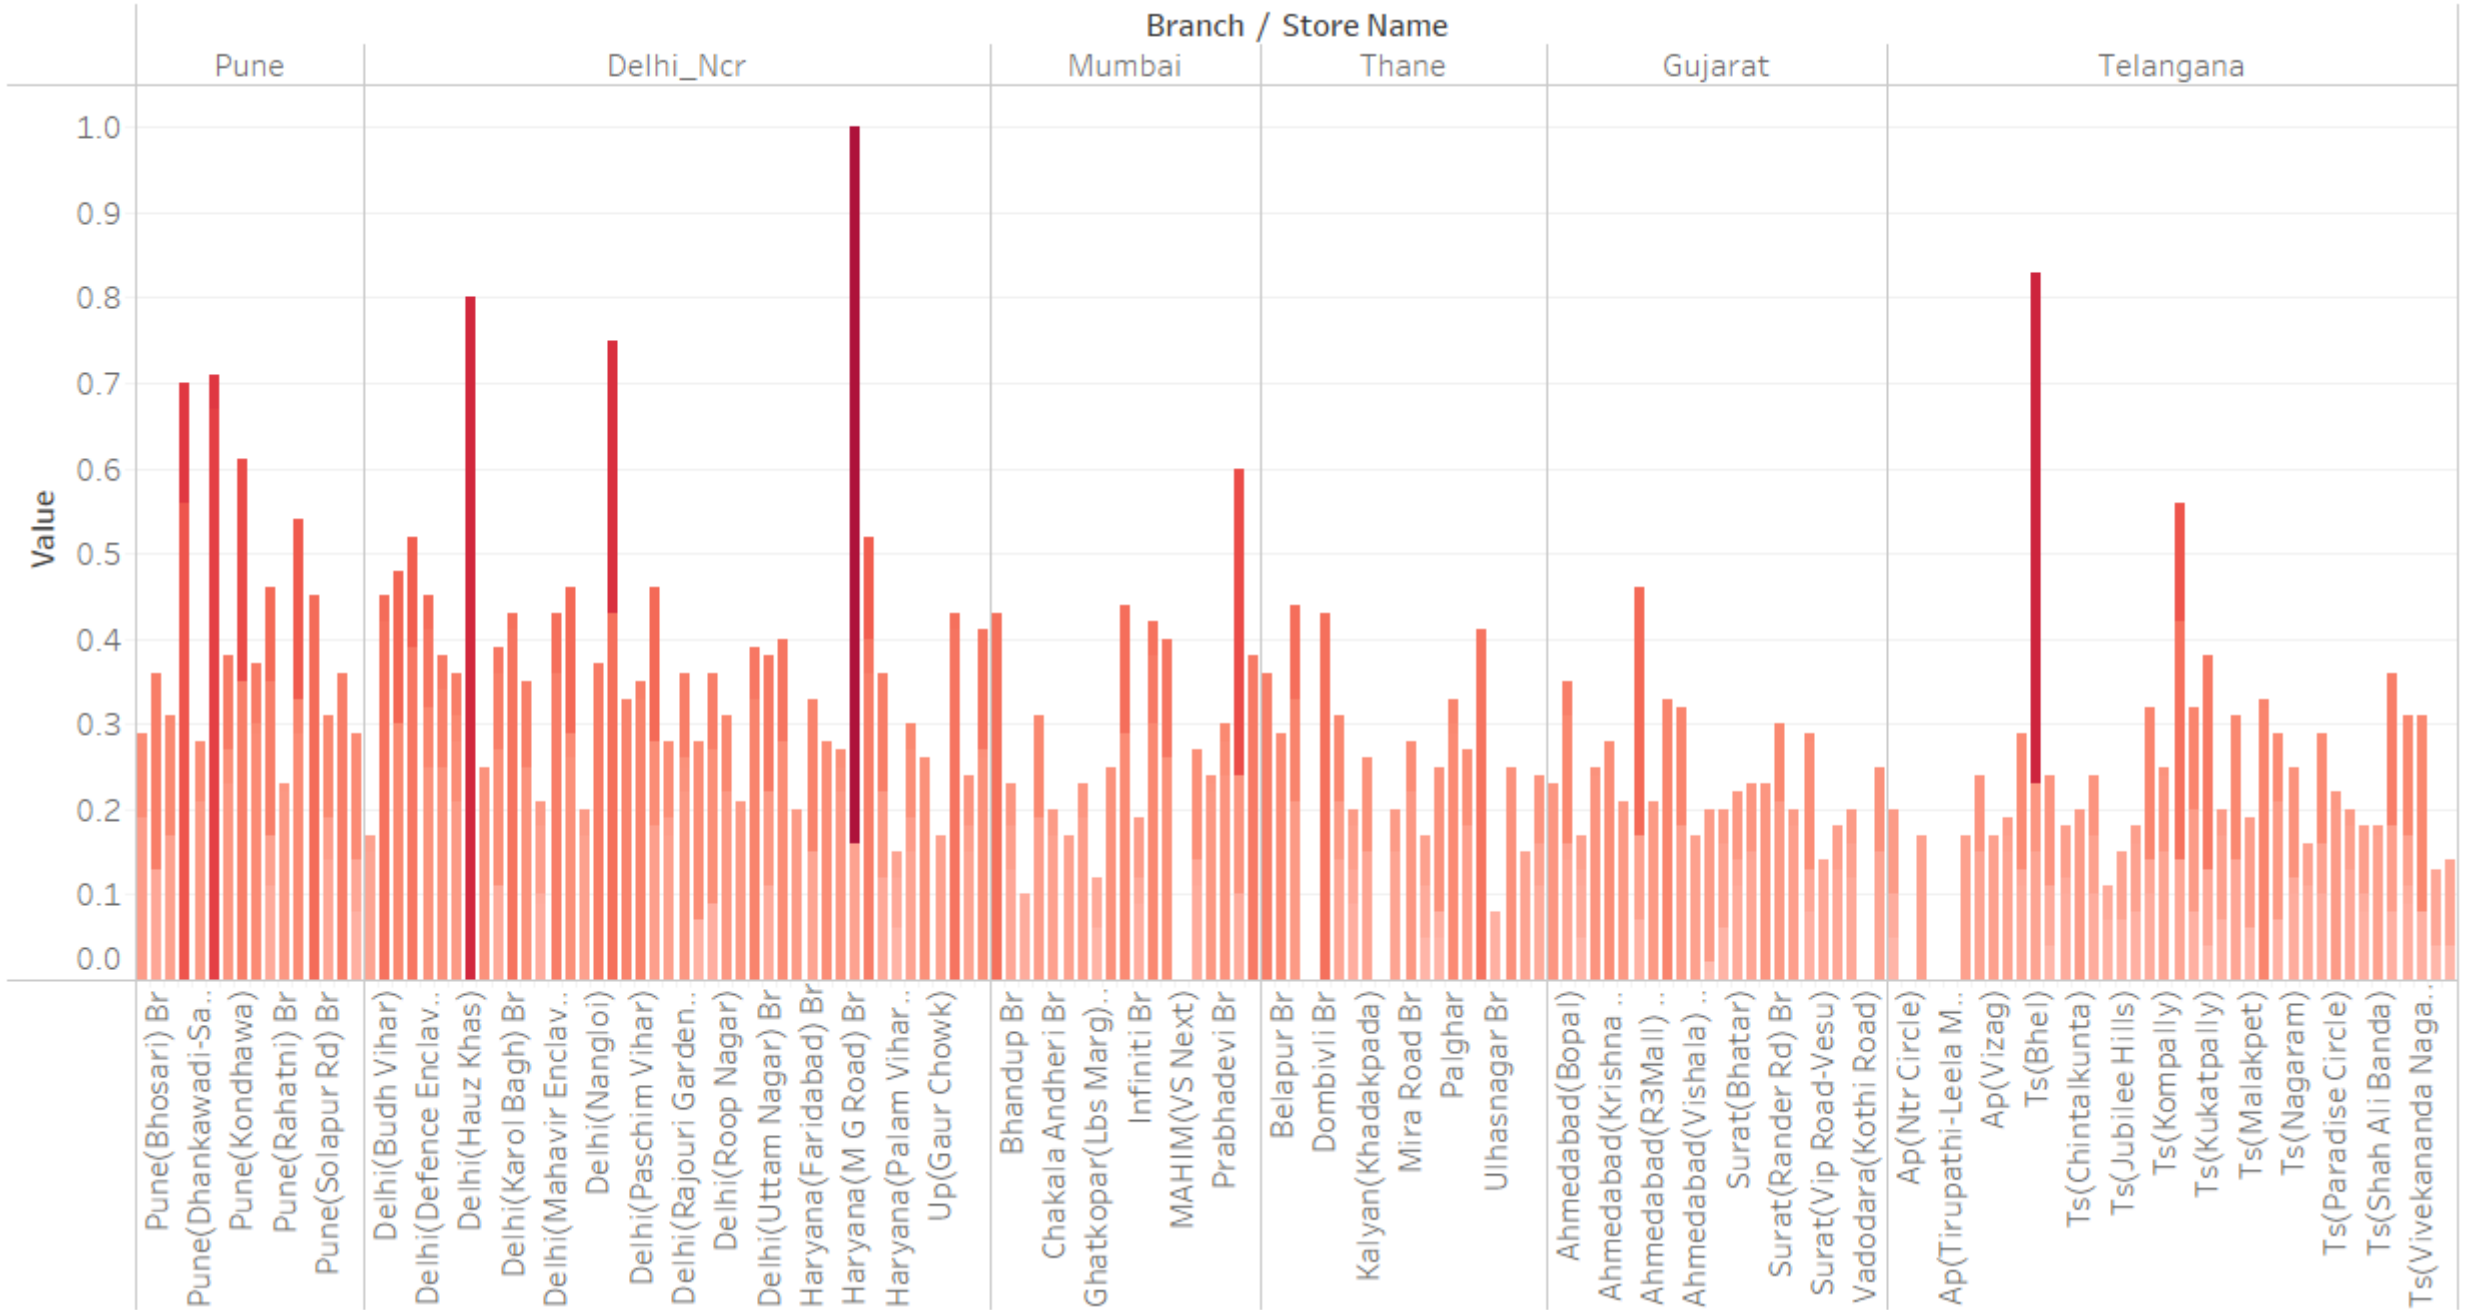

Month-wise Sales Trend Analysis

- **November–December represents the peak sales period**, indicating strong seasonal uplift,.
- **August records the lowest sales performance**, suggesting a seasonal dip and weaker customer conversion during this period.

Telangana: Store Footprint vs Performance Mismatch

Telangana has **40 stores**, making it the **second-largest region by store count**.

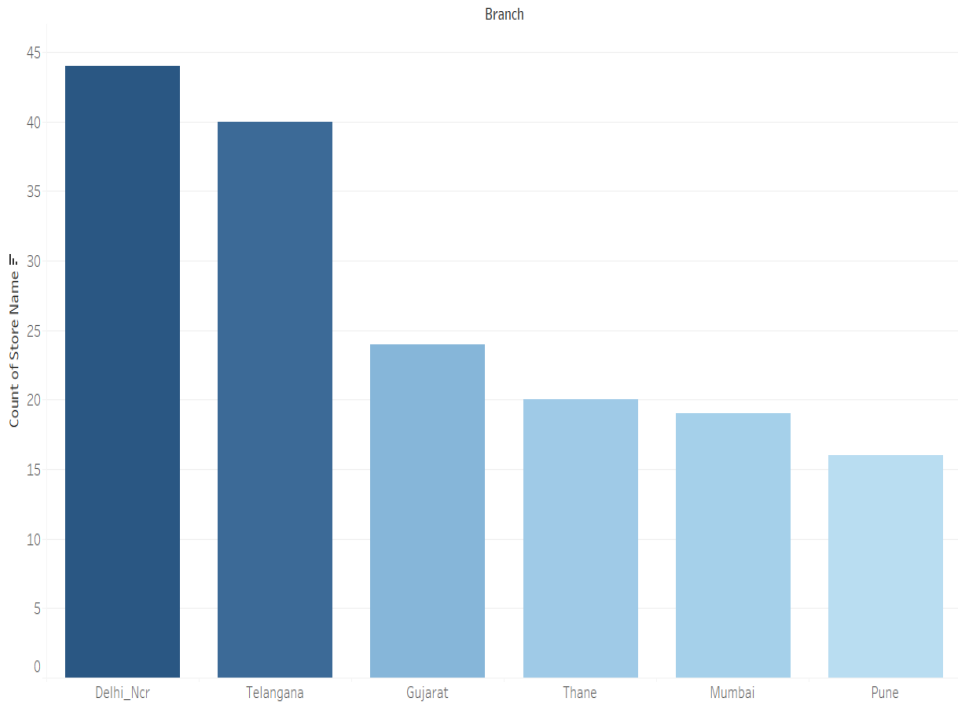

However, despite this large presence, **Telangana contributes the lowest insurance attach percentage overall**.

This imbalance indicates:

High **operational and maintenance costs**

Low **insurance conversion efficiency**

Conclusion: A significant portion of Telangana stores are likely operating at a loss from an insurance attach perspective.

Strategic Recommendation for Telangana

To optimize profitability:

- **Retain only top-performing stores**
- **Rationalize or close consistently underperforming locations**

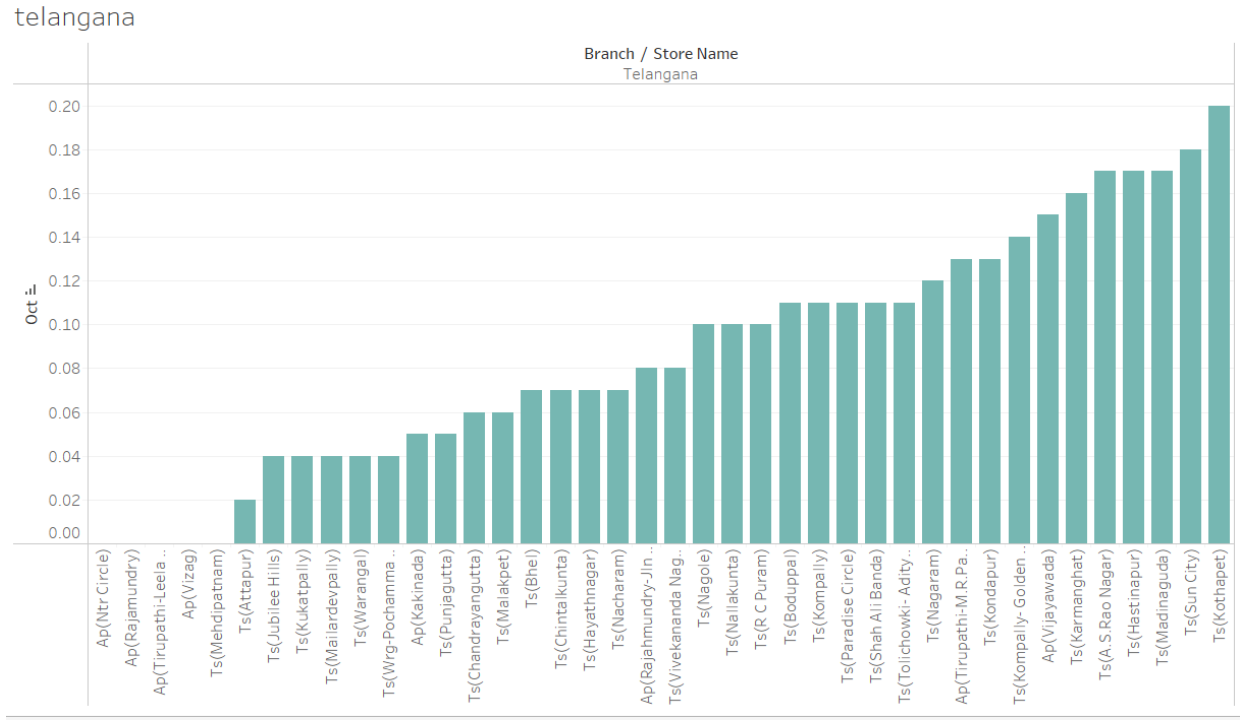

Alternatively:

- **Targeted initiatives** such as staff training, incentive restructuring, or revised sales scripts should be implemented before final closure decisions.

Telangana Month-wise Performance

Best performing month: December

Worst performing month: August

This aligns with the overall seasonal trend but with **weaker magnitude compared to other regions**, highlighting structural issues rather than seasonal ones alone.

Zero-Contribution Stores During Peak Season

November (Peak Season) – 0% Attach Stores in Telangana
Despite being the highest sales month, the following stores recorded **0% insurance attachment**, which is a strong red flag:

- Ap (Vizag)
- Ap (Tirupathi – Leela Mahal Circle)
- Ap (Rajamundry)
- Ap (NTR Circle)

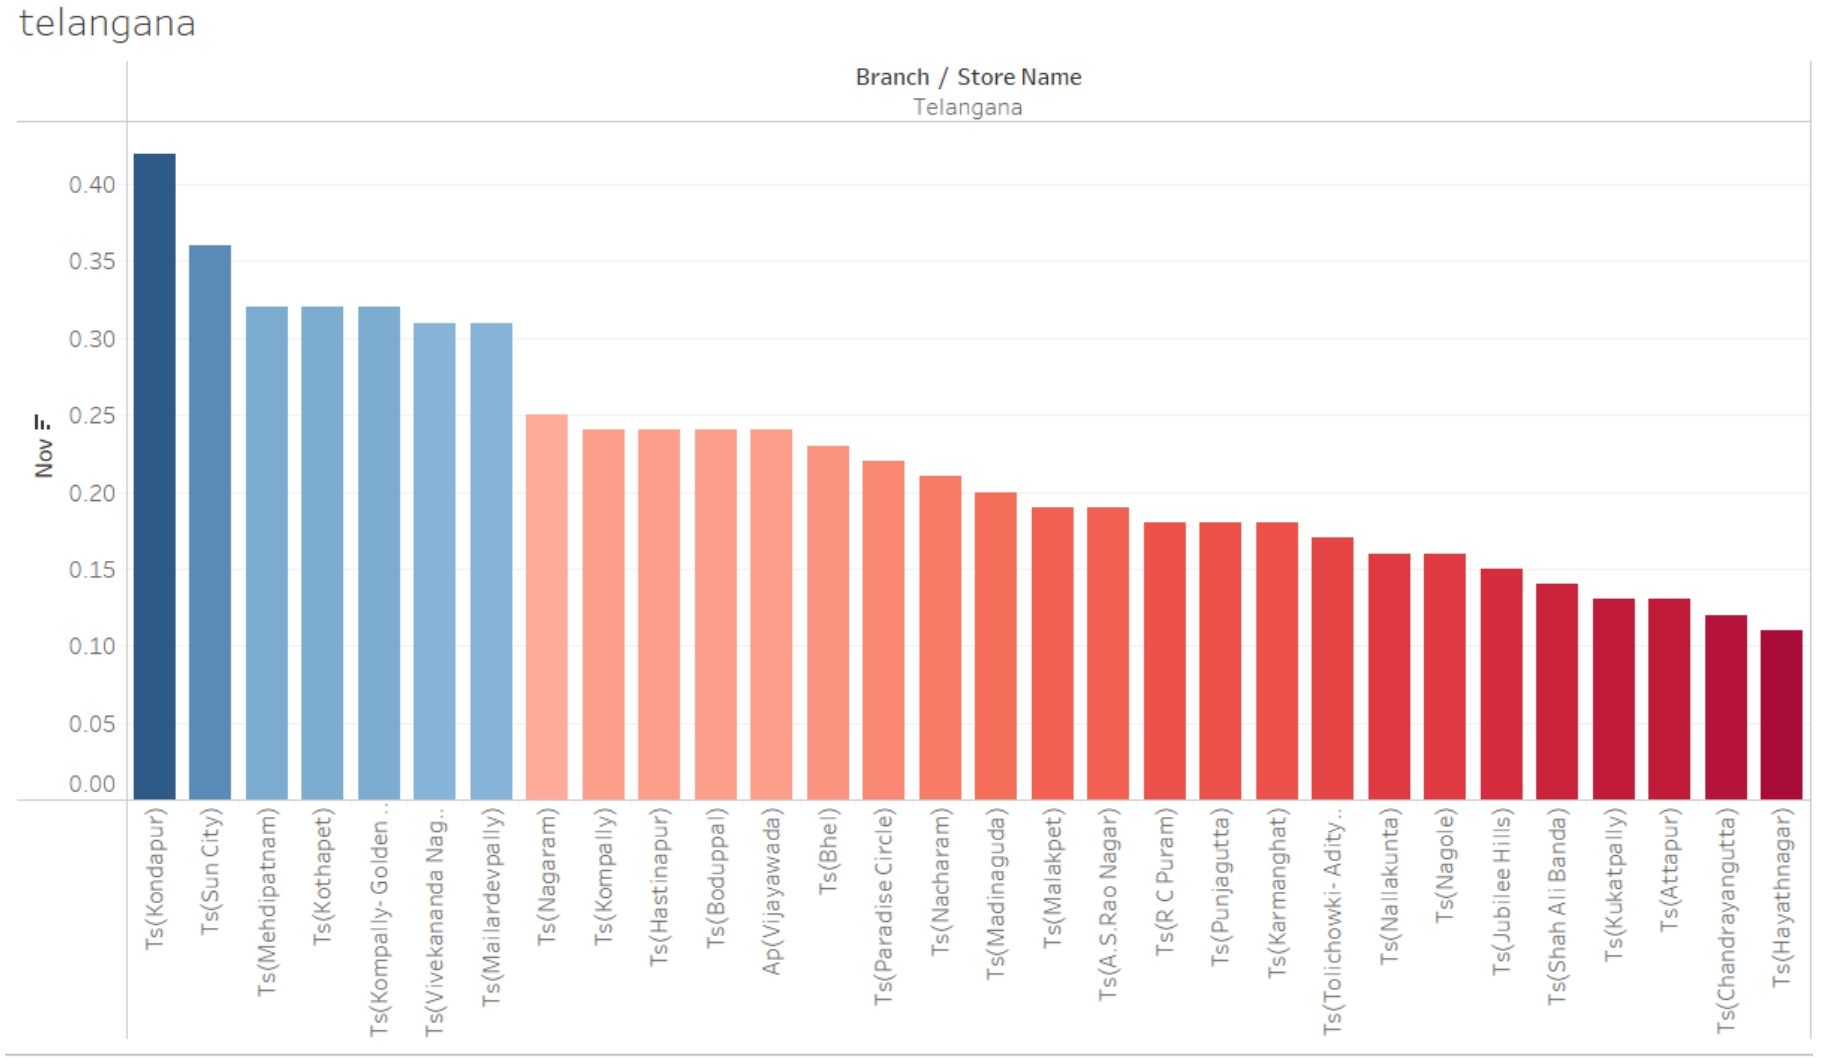

Action required: These stores should either be **closed** or subjected to **immediate corrective initiatives**, as zero performance during peak demand indicates systemic failure.

December – 0% Attach Stores in Telangana

- Ts (Nagaram)
- Ts (Madinaguda)
- Ts (Jubilee Hills)
- Ts (Hayathnagar)
- Ap (Vijayawada)
- Ap (Vizag)
- Ap (Tirupathi – Leela Mahal Circle)
- Ap (Rajamundry)
- Ap (NTR Circle)

Insight: Repeated zero-contribution stores across November and December suggest **chronic underperformance**, not isolated monthly issues.

Where New Markets Turn Profitable?

Pune

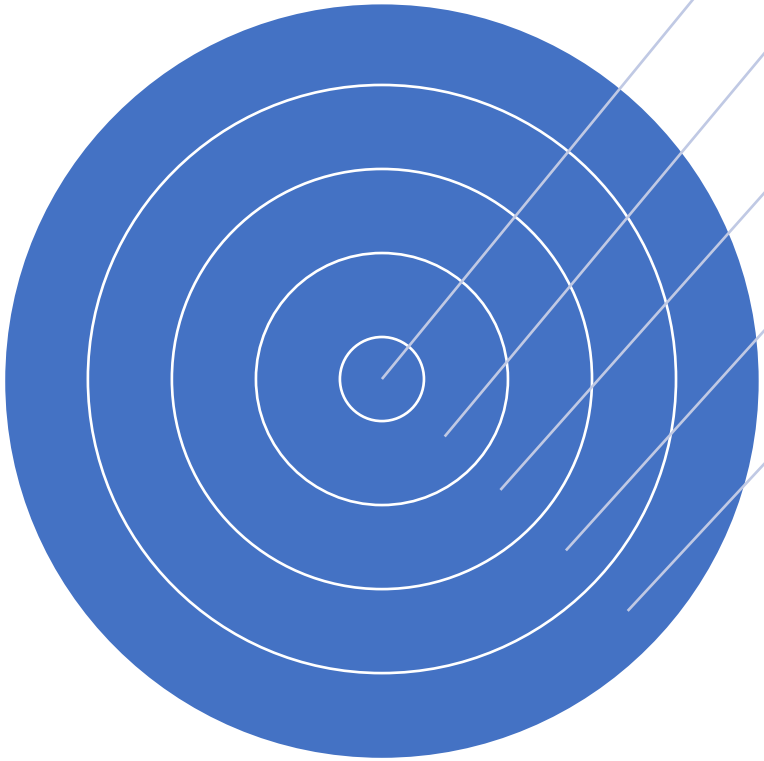

The Delhi_Ncr and Pune are the top 2 performer for almost every month's chart.

Concluding the number of stores in each of these:
Delhi_ncr: 44
Pune: 16

PUNE must be targeted for the expansion of stores/market in upcoming events. With a higher success rate in comparison to other stores.

Pune emerges as the **most stable and high-performing branch** in the network. Store-level attach percentages remain **consistent across all months**, indicating strong execution, mature processes, and reliable customer conversion for insurance products.

Most consistent branch: Attach % remains unchanged across Aug–Dec

Top store: Hadapsar – 60% attach (highest in Pune)

Other strong performers:

- Kothrud (37%)
- Bhosari (32%)
- Kondhawa (28%)

Mid-range stable stores: 19%–26% attach (Baner, Nagar Rd, Chinchwad, Satara Rd)

Lowest performer:

- Dange Chowk – 0% attach in all months

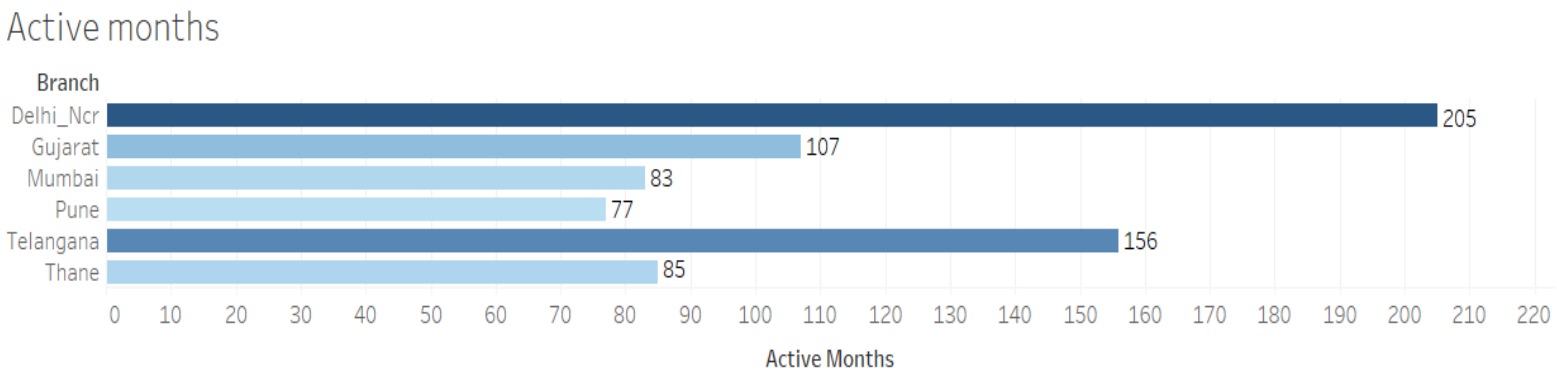

Expansion

With least no. of stores i.e, 16 and top 3rd in terms of area available for store expansion, pune being top 2nd performer among all branches, It offers the most fertile location to expand business, with high success rates.

<u>But, why such a small expansion in pune?</u>

It exhibits the least number of **Active months.**
Active months: how many months a store had a non-zero attach percentage.
Two stores with the least active months in pune are: Pune(Tilak Rd)Br and Pune(Dange Chowk)

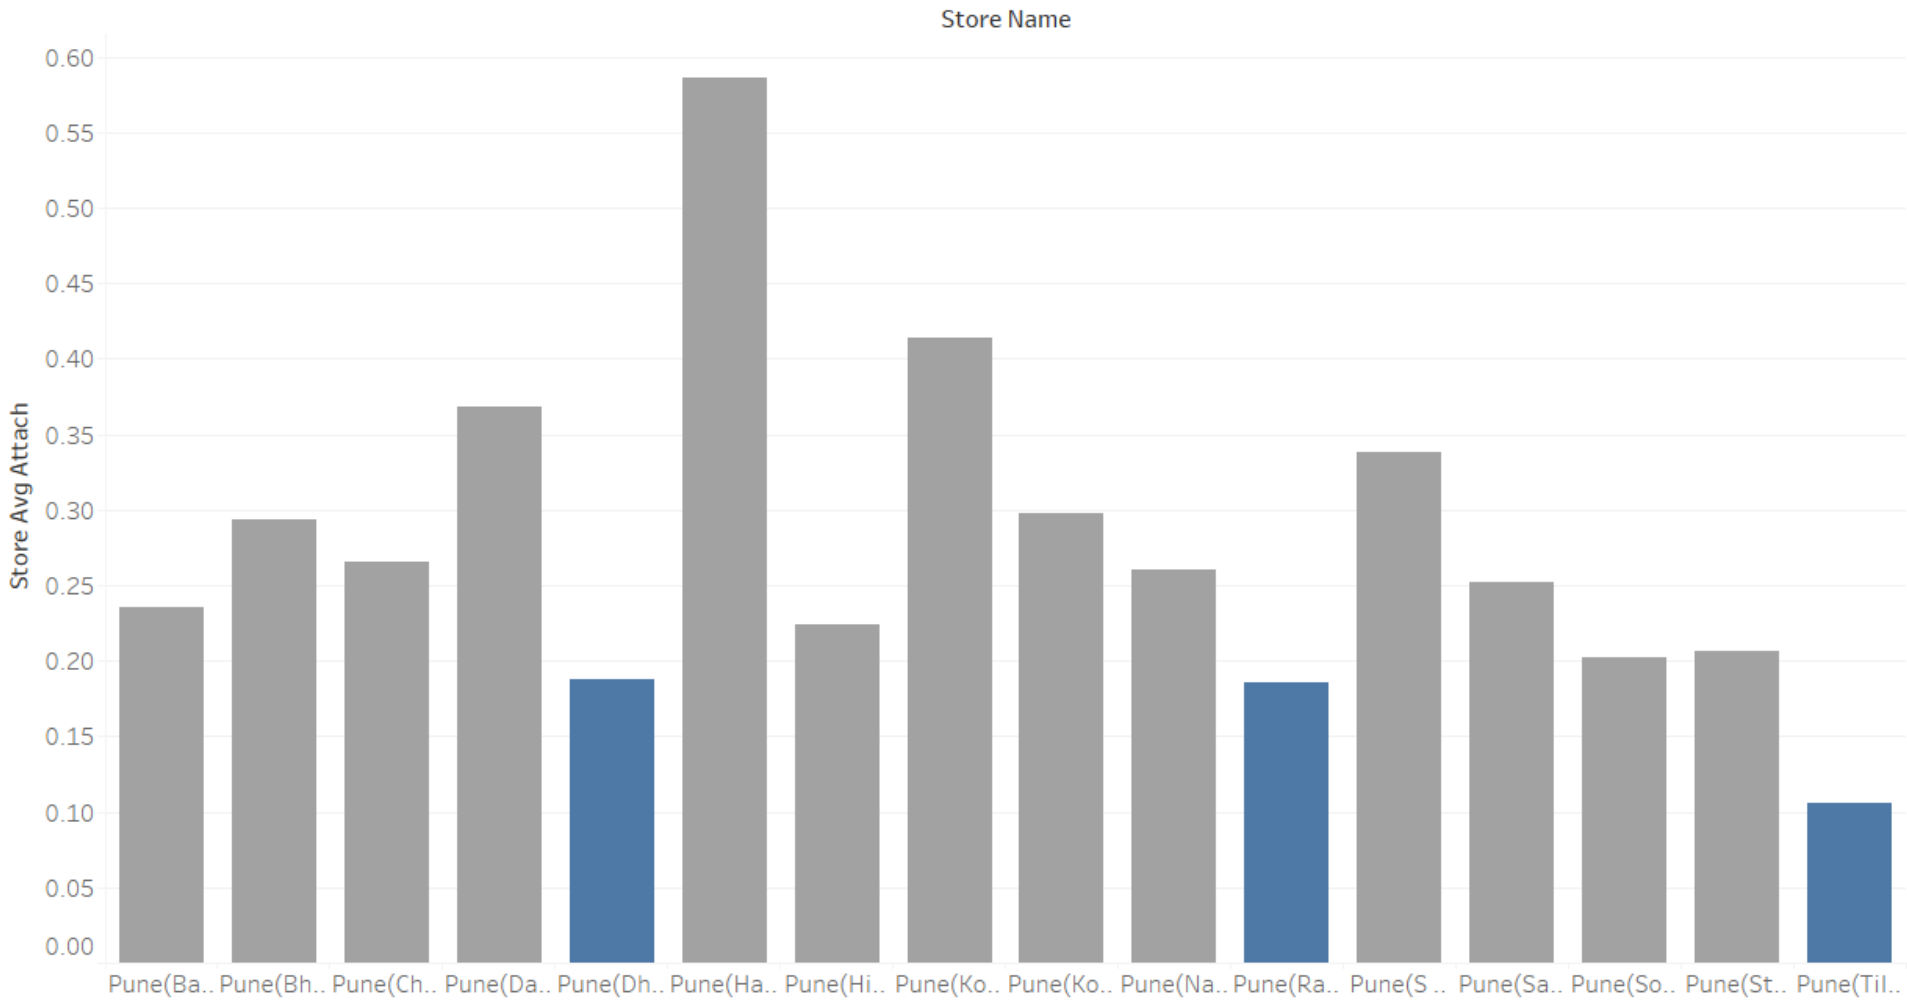

Active months

Store Average

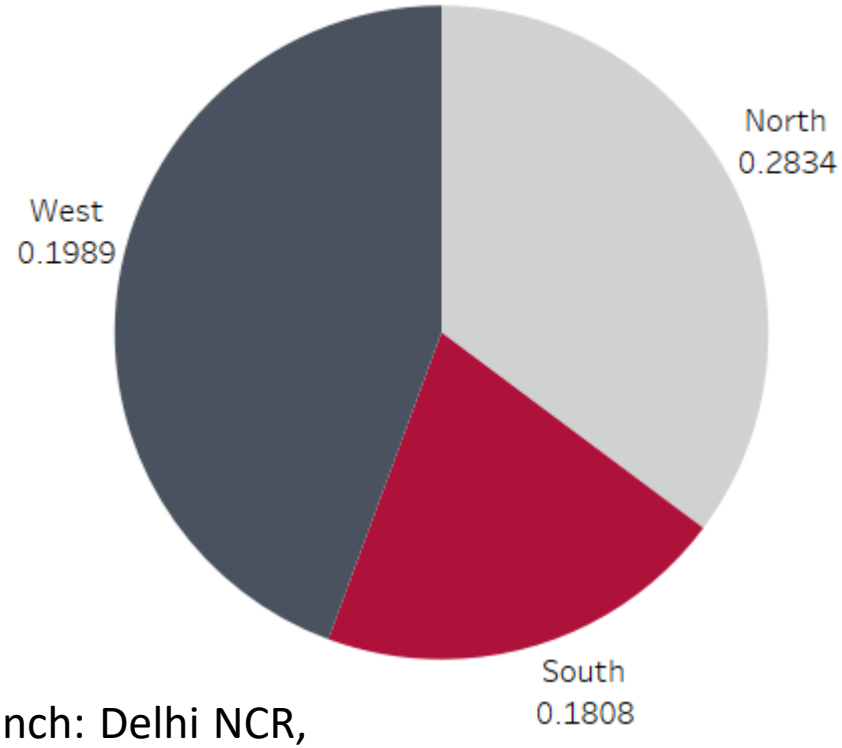

Stores responsible for loss/ low % contribution are: Pune(Dhankawadi-Satara Rd), Pune(Rahatni) Br, Pune(Rahatni) Br

Regional Analysis

Branches were grouped into broader geographical regions such as North, West, and South. How it was constructed:
Each branch was mapped to its corresponding geographical region.

North India: Delhi_NCR
West India: Gujarat, Mumbai, Pune, Thane
South India: Telangana

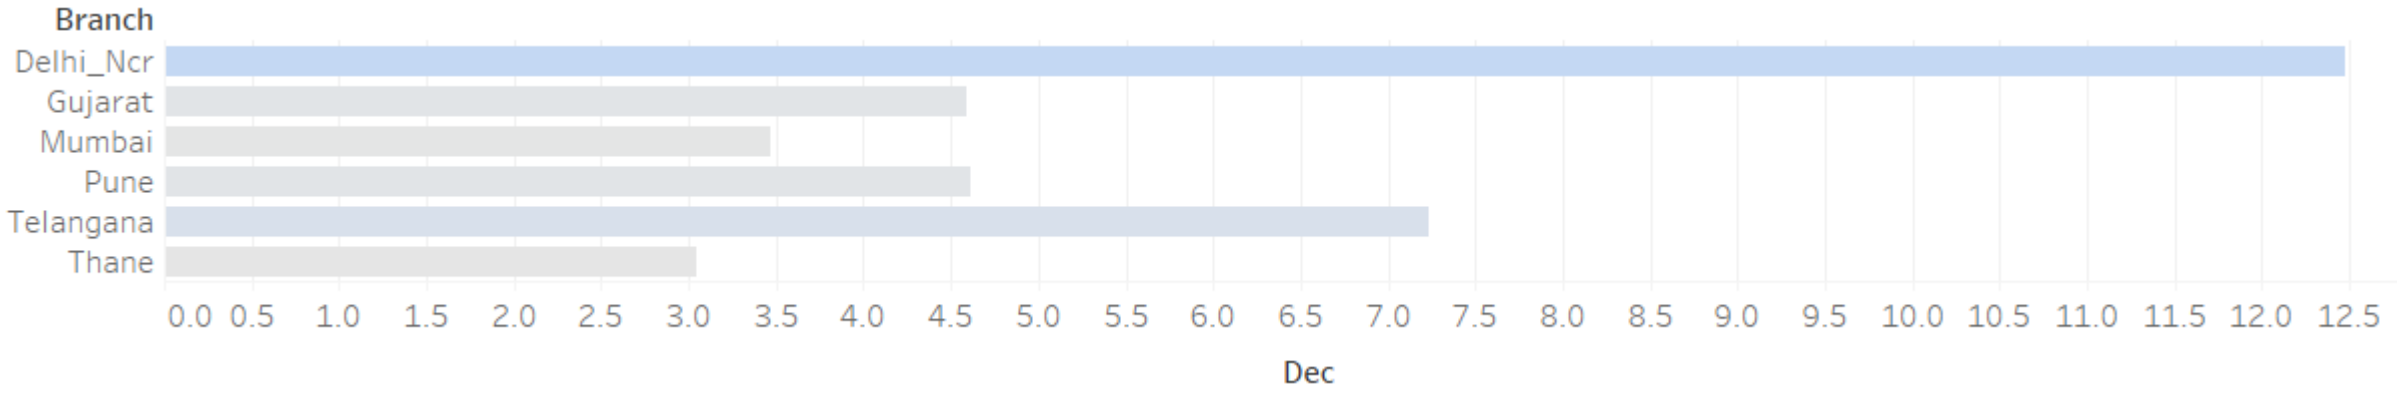

Highest contribution: West Region
Lowest contribution: South Region

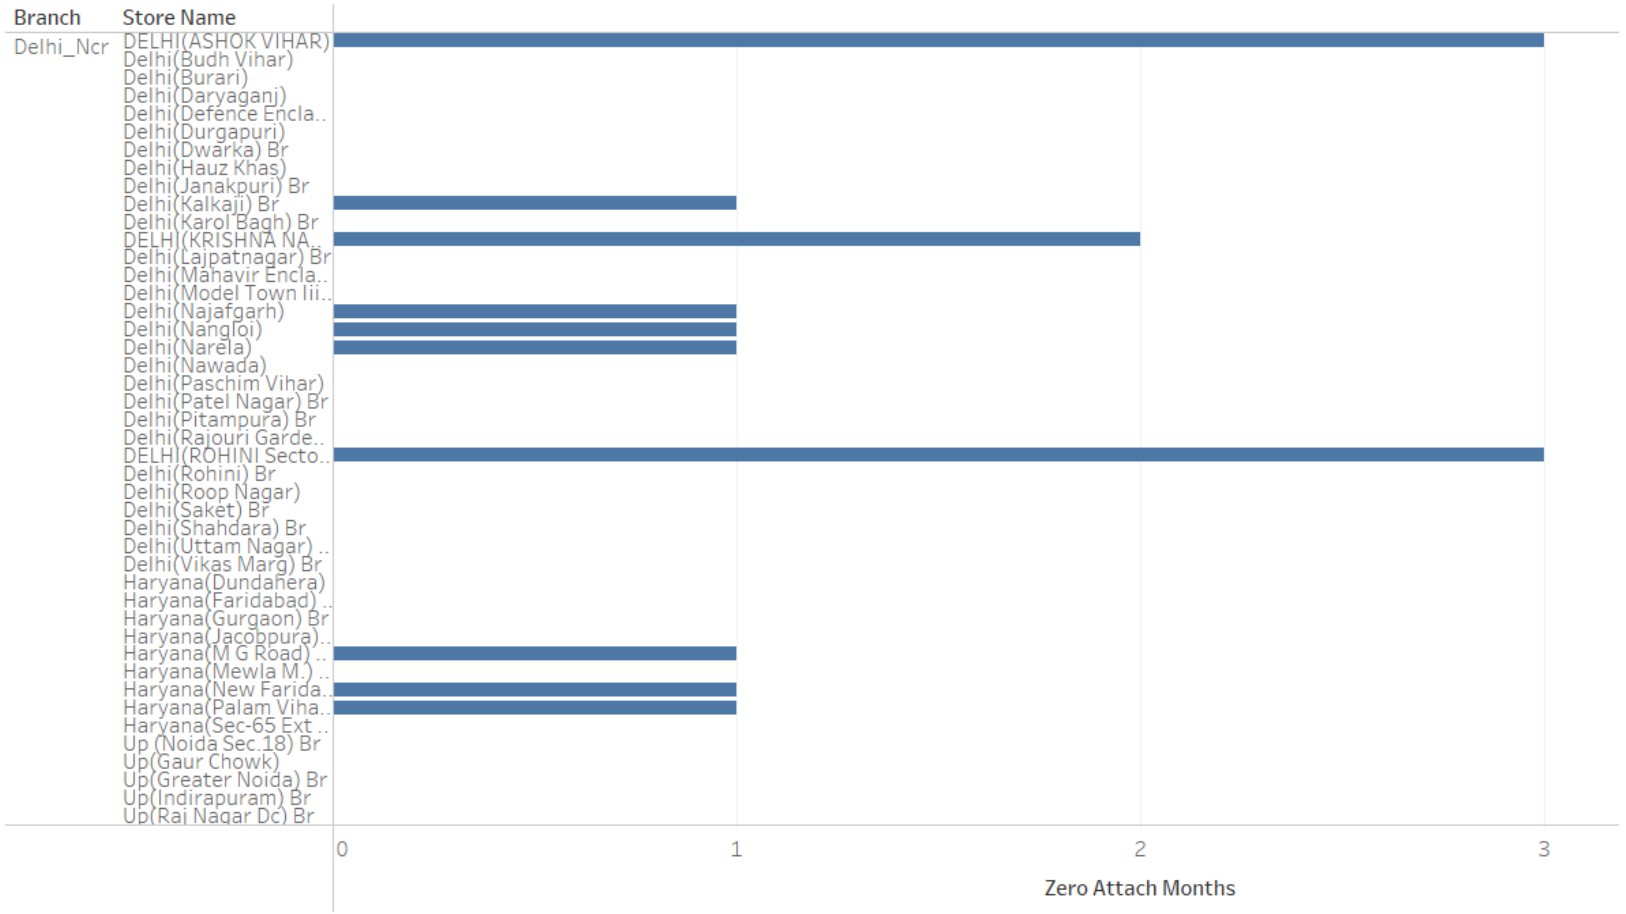

- North Region Being the 2nd highest contributor, with only one branch: Delhi NCR, speaks itself about the existing market value of the company in Delhi. Every new service/change must be introduced here. Company should consider it High-Intensity Market place.

Delhi NCR

- It is the most profitable branch of the company, with above median performance , average number of stores and minimum zero % contributions.
- But this can be enhanced more, by working on least profitable stores in Delhi NCR, by advertising / introducing schemes or campaigns.

The highlighted (blue) stores represent locations with one or more zero-attach months, indicating inconsistent insurance sales contribution and potential operational gaps.

DELHI (ASHOK VIHAR)
DELHI (KALKAJI BR)
DELHI (KAROL BAGH BR)
DELHI (KRISHNA NAGAR)
DELHI (MODEL TOWN)
DELHI (NAJAFGARH)
DELHI (NANGLOI)
DELHI (NARELA)
DELHI (ROHINI SECTOR)
DELHI (ROHINI BR)

These zero-attach stores require **immediate corrective action through focused training, tighter sales accountability, or strategic closure if performance does not improve within a defined review period**.
